

## Visualize Performance

Good decisions require a solid basis. Everyone involved in the development process needs an optimal environment before being able to perform evaluations of current processes and trends. Key figures help to react more quickly when risks become apparent or objectives are not achieved.

PLATO e1ns condenses data, transforms it into relevant key performance figures and presents it in an easily

accessible and comfortable interface for information about and interpretation of current processes and trends.

Project leaders use reports to filter data individually for current issues, to examine particular time intervals or to put together data tables for further analysis.

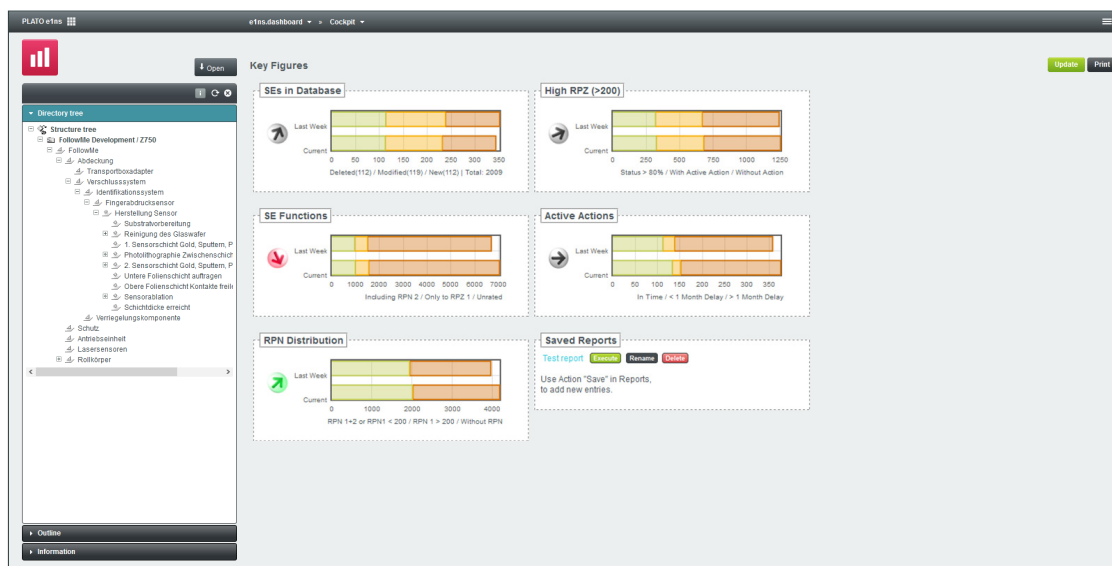

Fig.: The Dashboard evaluates the data of PLATO e1ns and provides indicators and reports.

## Functions and Benefits of e1ns.dashboard

- Preparation and condensing of large quantities of data
- Support for decision-making processes using current status information
- Transparency for risk potential, analysis maturity and projects
- Display of action status, deadlines and delays
- Early identification of trends and outliers
- Easy to use and easy access via the web browser
- Visualization of project activity and complexity

## Primary Focus and Functions of e1ns.dashboard

### Project Evaluation

Activity index of the progress

- Complexity and scope
- Maturity

### Risk Monitoring

- Risk overview - minimum, acceptable, and hazardous risks
- Percentage distribution of the risks

### Actions

- Status of the formulation and specification of optimizations
- Progress of the actions to be taken
- Evaluations of deadlines and delays

### FMEA - Status of the Analysis

- Maturity of the analysis
- Progress of the failure analysis

### Data Statistics

- Statistics to help determine the maturity of product development
- Helps you to estimate the expenses and progress

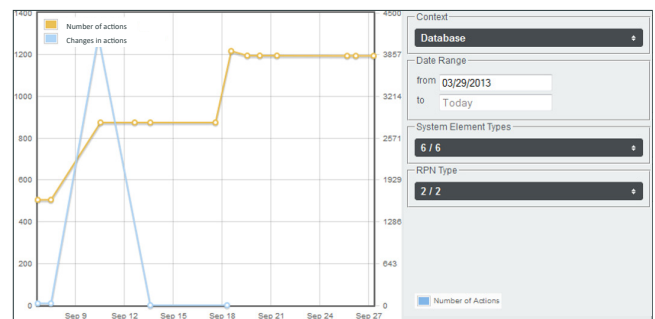

Fig.: Report with filter and data table.

## Custom Reports

Add your own indicators and reports to supplement the existing standard evaluations available in the dashboard. PLATO can develop the following according to your specifications:

- Indicators with their preferred graphic displays
- Reports for new evaluations
- Additional filter functions
- Evaluation of other types of data
