

Keep Evidence of Engineering and Guarantee Compliance

Whether in file format or as an electronic document bundle, whether as evidence of compliance with standards or as documentation for customers - PLATO e1ns ensures that all data gathered during the product development process is complete and up to date.

Depending on the Industry or Individual Application, this could be:

- Device Master Record
- Risk Management File
- Functional Safety File
- Technical/Functional Specification

Individual files are created automatically. Master data, analysis results or partial results are summarized and carried over to a structured output format. If required, output-specific user data can be entered when creating files.

The screenshot displays the PLATO e1ns interface. It features a table of 'Completed outputs' with columns for 'Creation date', 'Output format', 'Language', 'Creator', and 'Draft'. Below the table, there are 'Share', 'Open', and 'Delete' buttons for each entry. A modal dialog is open, showing a progress bar and a 'Cancel' button.

Creation date	Output format	Language	Creator	Draft	Open
04/19/2017 08:44:59	Risikomanagement-Akte	de	Julia Meyer-Holderbaum	Draft	Open

Creation date	Output format	Language	Creator	Share	Open	Delete
04/19/2017 08:44:59	Statusbericht-Maßnahmen	de	Julia Meyer-Holderbaum	Share	Open	Delete
04/19/2017 08:43:44	DVP&R	de	Julia Meyer-Holderbaum	Share	Open	Delete
04/19/2017 08:42:55	Lastenheft					
04/19/2017 08:38:20	FMEA Output					

Fig.: An overview displays the documents and files created for an element, a system, or a product.

Functions and Benefits of e1ns.output

- Automatic creation
- Guaranteed completeness
- Only current data is used
- Output is configurable (e.g. adapted to standards, customers, industries etc.)
- Company standards are abided by
- Data origins can be traced (auditable)
- Fast creation of as many versions as desired

Primary Focus and Functions of e1ns.output

Data

- Format and layout
- Master data
- Method data/forms
- Risk analyses, incl. evaluation catalogs
- Filtered method data (excerpts from analyses)

Format

- Output as a PDF document
- Transfer to document management

Output-specific Data

- During creation, data is entered or checkmarks are placed next to queries that are only relevant to the output.
- Output-specific data is stored and can be reused.

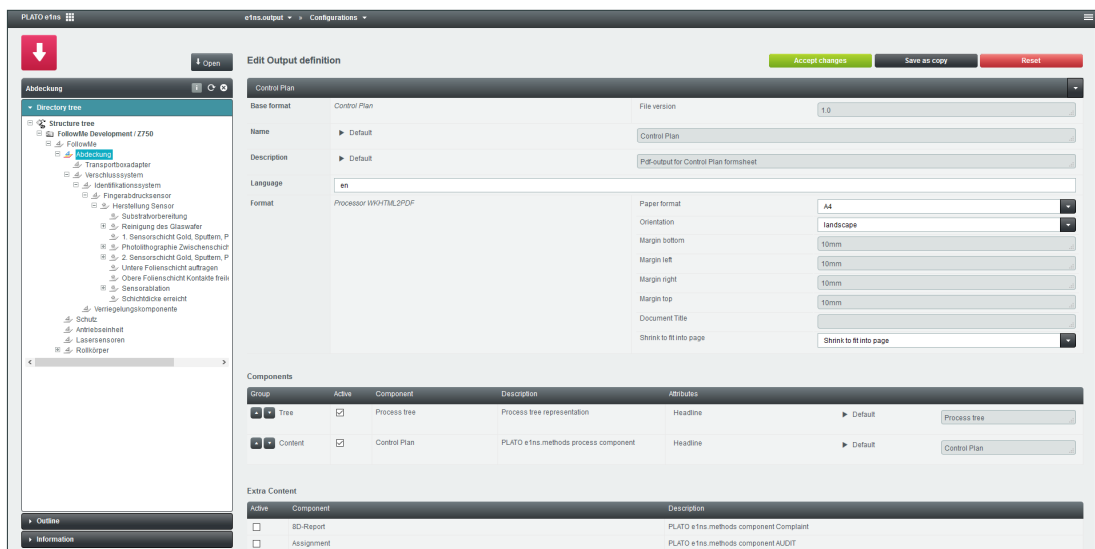

Fig.: Edit output format.

Custom Output Documents

In e1ns.output, PLATO offers you the ability to configure output documents individually.

- Specification of the custom output
- Configuration of the output
