- Only a local installation is necessary, the work in the software is done completely via the web browser
- Practical relevance through software support of lecture topics, such as risk management, product development, etc.
- Enhancement of professional qualifications through early handling of PLATO e1ns

More Practice with PLATO

Access to the latest technologies is an important basis for success in studies and profession. PLATO e1ns is **one of the most efficient and innovative software solutions** on the market with its web-based access, the practical modules for fulfilling a wide range of engineering requirements and tasks. PLATO e1ns stands for risk and knowledge management in the customer-oriented development of products and is used for products and production processes in various sectors.

PLATO e1ns for Universities

With the PLATO University Program, the participating university is given the opportunity to carry out the entire development process with software support at the highest level for teaching purposes. This starts with customer requirements, goes on to specifications in function-driven system analysis and extends to risk analysis and the derivation of measures.

Universities receive one semester of free web access to PLATO e1ns software licenses for use in courses. Use in teaching includes classroom courses, laboratory courses or related university programs. *Commercial use is excluded.

The contract can be extended for further semesters.

PLATO e1ns Software Licenses

- The scope and modules of the PLATO e1ns software licenses are specified in the contract.
- The contract must list all courses of study and courses involved in the licenses.
- The use of the licenses is limited to one semester.
- The licenses can be extended on request.
- The use of the software PLATO e1ns is limited to computers owned by the university, staff and enrolled students.
- The lecturer receives a free PLATO e1ns training course by arrangement.
- PLATO AG receives a reference report from the university for publication.
